

Almost 90% of contracts included success fees based on energy savings

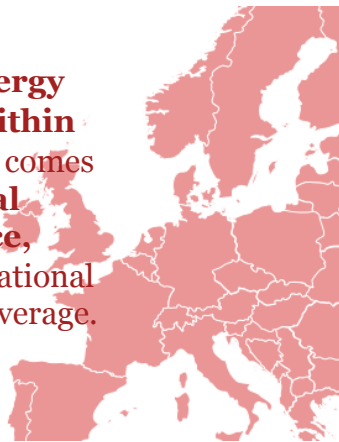

The value of societal damages avoided is estimated at 60 M€, which be around 1,5 times the amount SCEEF invested.

152.000 MWh/year of energy generated from renewable sources, such as biomass, biogas or solar power.

71% of energy generated within SCEEF projects comes from local fuel source, exceeding the national and European average.

SUMA CAPITAL voluntary contribution towards better air quality

- Installation of SO_x and particulates matter emissions abatement technologies.
- Installing individual metering of heat consumption: ~20% less energy demand.
- Fuel switching towards low-emitting fuels such as biogas.
